

Title: reframe the title (pin pointed)

Guide: Y Kalyan Chakravathi

Problem Statement:

Should be written in point wise not by mentioning i/.p and o/p

Output should be reframed, predition word should be used.

Objectives of the projects

Requirements were not clear

Title cannot be an objective

All the symptmos (justification)?

How many diseases considered ! should focus on which kind of diseases to be found out using 4/5 symptoms. Which FE(feature selection) is used? **NO clarity on FE**

Need to get clear understanding on what you are working on.

Literature review and summary

how many symptoms they considered,.

Literature should be done with latest papers in the domain, more literature to be studied.

Remarks should be well written

Data sets and software requirements

Requirements were not clear

Should consider at least 2 datasets to train or check the model

Architecture/ project flow diagram

Which data preprocessing model is getting used?

Algorithms in standard format

Algorithm to be written in professional manner as mentioned.
